324. _____
325. _____
326. _____
327. _____
328. _____

329. **Q. WATER INTRUSION AND MOLD GROWTH:** Studies have shown that various forms of water intrusion affect
330. many homes. Water intrusion may occur from exterior moisture entering the home and/or interior moisture
331. leaving the home.

332. Examples of exterior moisture sources may be:

- 333. • improper flashing around windows and doors,
- 334. • improper grading,
- 335. • flooding,
- 336. • roof leaks.

337. Examples of interior moisture sources may be:

- 338. • plumbing leaks,
- 339. • condensation (caused by indoor humidity that is too high or surfaces that are too cold),
- 340. • overflow from tubs, sinks, or toilets,
- 341. • firewood stored indoors,
- 342. • humidifier use,
- 343. • inadequate venting of kitchen and bath humidity,
- 344. • improper venting of clothes dryer exhaust outdoors (including electrical dryers),
- 345. • line-drying laundry indoors,
- 346. • houseplants—watering them can generate large amounts of moisture.

347. In addition to the possible structural damage water intrusion may do to the Property, water intrusion may also result
348. in the growth of mold, mildew, and other fungi. Mold growth may also cause structural damage to the Property.
349. Therefore, it is very important to detect and remediate water intrusion problems.

350. Fungi are present everywhere in our environment, both indoors and outdoors. Many molds are beneficial to
351. humans. However, molds have the ability to produce mycotoxins that may have a potential to cause serious
352. health problems, particularly in some immunocompromised individuals and people who have asthma or allergies
353. to mold.

354. To complicate matters, mold growth is often difficult to detect, as it frequently grows within the wall structure. If you
355. have a concern about water intrusion or the resulting mold/mildew/fungi growth, you may want to consider having the
356. Property inspected for moisture problems before entering into a purchase agreement or as a condition of your
357. purchase agreement. Such an analysis is particularly advisable if you observe staining or musty odors on the
358. Property.

359. **R. NOTICE REGARDING PREDATORY OFFENDER INFORMATION:** Information regarding the predatory
360. offender registry and persons registered with the predatory offender registry under MN Statute 243.166
361. may be obtained by contacting the local law enforcement offices in the community where the property
362. is located or the Minnesota Department of Corrections at (651) 361-7200, or from the Department of
363. Corrections web site at <https://coms.doc.state.mn.us/publicregistrantsearch>.

Radon Testing

Any test lasting less than three months requires **closed-house conditions**. Closed-house conditions include keeping all windows and doors closed, except for normal entry and exit, and temperature set to 65 – 80 °F. For a full list of closed-house conditions please visit mn.gov/radon/notice.

Before testing: Begin closed-house conditions at least 12 hours before the start of the radon test.

During testing: Maintain closed-house conditions during the entire duration of the short-term test. Operate home heating or cooling systems normally during the test.

Where should the test be conducted? Any radon test conducted for a real estate transaction needs to be placed in the lowest livable area of the home suitable for occupancy. This is typically in the basement, whether finished or unfinished. If other foundations are present, such as a crawl space or slab on grade, also test the rooms above these foundations.

Place the test kit:

- 20 inches to 6 feet above the floor
- 3 feet from exterior doors and windows
- 1 foot from exterior walls
- away from heat sources and drafts caused by vents and fans
- not in enclosed areas or areas of high heat/humidity

How are radon tests conducted in real estate transactions?

There are special protocols for radon testing in real estate transactions. Because these tests are time-sensitive there are two testing options. For both tests, test for a minimum of 2 days.

Continuous Radon Monitor (CRM)

MDH recommends CRMs in real estate testing. CRMs are calibrated, provide more data, and may detect tampering. The average of the results are used to make a decision to mitigate.

Simultaneous Short-Term Testing

Two short-term test kits are placed side by side, 4" – 8" apart. The results of the two tests are averaged and used to make a decision to mitigate.

Radon Mitigation

When elevated levels of radon are found, they can be easily reduced by a licensed professional.

Radon mitigation is the process or system used to reduce radon concentrations in the breathing zones of occupied buildings. The goal of a radon mitigation system is to reduce the indoor radon levels to below the action level. This is done by drawing soil gas from under the house and venting it above the roof. A quality mitigation system is often able to reduce the annual average radon level to below 2.0 pCi/L. The cost of a radon mitigation system averages \$1,500 to \$3,000.

After a radon mitigation system is installed perform an independent short-term test to ensure the reduction system is effective. Operate the radon system during the entire test. This short-term test will confirm low levels in the home. Be sure to retest the house every two years to confirm continued radon reduction.

All radon testing and mitigation should be conducted by licensed radon professionals. Radon service providers, such as home inspectors, must be licensed. A list of these licensed radon professionals can be found at MDH's radon web site. MDH conducts free inspections, upon request, of recently installed radon mitigation systems, to check that they meet requirements.

5. Minnesota Statute 103I.235 requires that, before signing an agreement to sell or transfer real property, Seller must disclose information in writing to Buyer about the status and location of all known wells on the property. This requirement is satisfied by delivering to Buyer either a statement by Seller that Seller does not know of any wells on the property, or a disclosure statement indicating the legal description and county, and a map showing the location of each well. In the disclosure statement Seller must indicate, for each well, whether the well is in use, not in use or sealed.

15. Legal requirements exist relating to various aspects of location and status of wells.
